HOW RURAL ADDRESSING WORKS
 EXAMPLE: The Rural Address to the right in red illustrates how emergency personnel would know that the access is on Range Road 12, on the east side, approximately 75 metres (150 divided by 2) north of Township Road 542.

GENERAL RULES AND GUIDELINES

- System is ACCESS based
- Numbers increase going north and west
- Odd numbers are on the south and east of roads
- Even numbers are on the north and west of roads
- There are 32 possible addresses per mile. 16 per side at 100 metre intervals
- Reference Road is the Township Road to the south or Range Road to the north
- If two accesses fall within the same interval OR two (or more) residences share one access, one (or more) will be given a letter designation, whichever is the north and/or west. See the following examples:

EAST-SOUTH-WEST-NORTH

Lots are numbered clockwise if possible. In the case of multiple blocks with duplicated lot numbers, the legal lot number and rural address number will likely not be the same.

Using the example subdivision on the grid, the main access is to the east. Therefore the rural address is:

54220 RGE RD 11

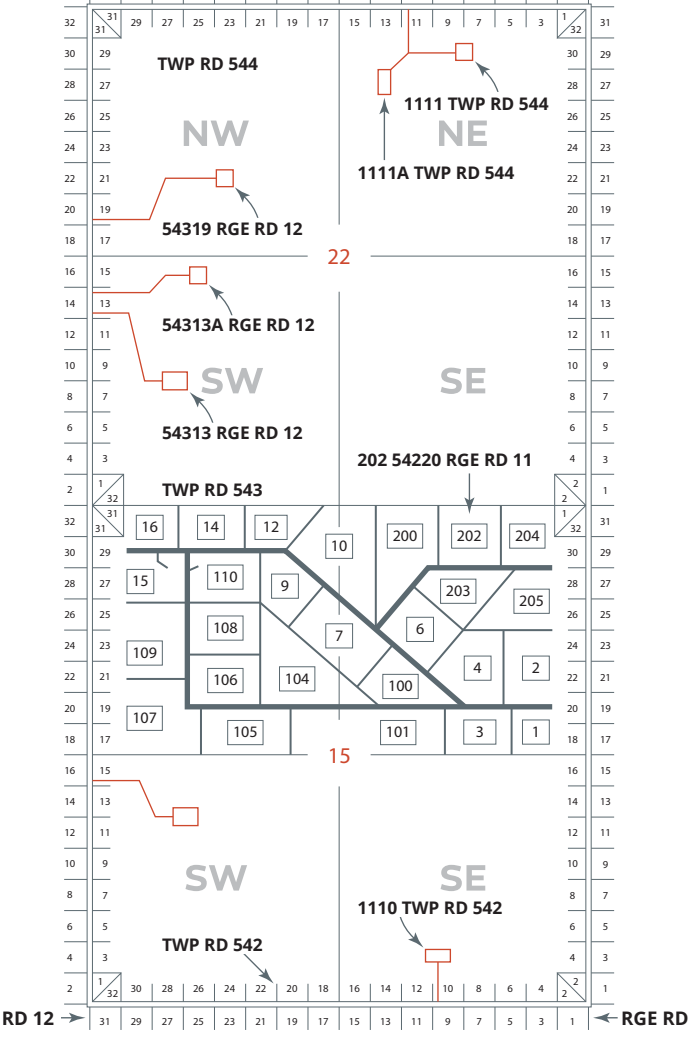

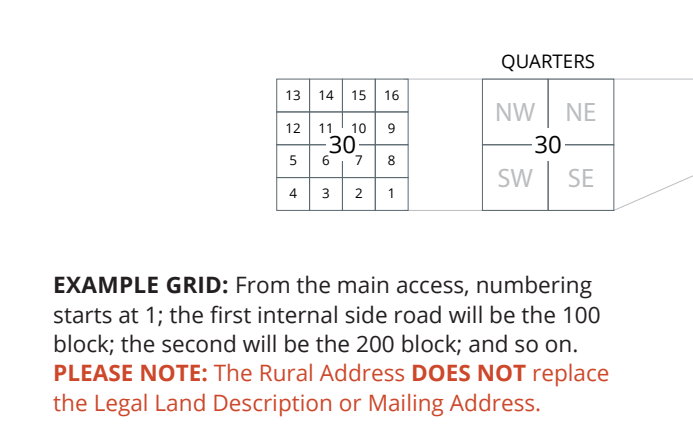

A lot in the subdivision is:

202, 54220 RGE RD 11

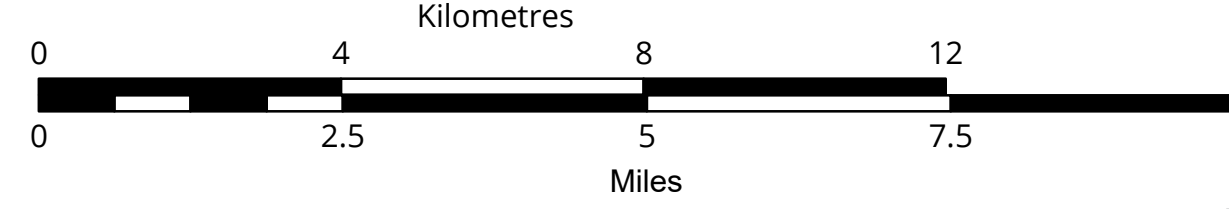

The second access to the west is:

2ND ACCESS TO 54220 RGE RD 11

Please note that this system is not accurate to very old/archaic addresses.

- AIRPORT
